Checkpoint 3 Sprint 4 peer review 21-12-2023

Leading mobile development, working on fixing some issues with keycloak the way it works in mobile and working on notifications, participating in discussion

Youssef has worked hard on the mobile app; his effort is commendable even though it's unfinished. A suggestion for improvement would be to join on-site sessions for quicker issue resolution.

Worked hard on the ionic app and you became more open in your communication, actively asking for help and collaborating more. You have continued working for the group project despite health concerns and became more proactive. Keep up the good work in the last sprint as well!

He is working hard on developing the mobile application. He is constantly looking for solutions to the problems he faces. He also discusses with the group the solutions he finds.

You clearly did a lot of work on both the mobile app and notification system at the same time, despite being ill for a large chunk of this sprint. Nice work. However, try not to juggle too many tasks at the same time. This makes things more manageable for yourself and the rest of the group.

This sprint you've struggled with notifications and getting it to even start which isn't a problem at all only improvement point I would say is that you need to ask for the group to help you or at least try to help you, but I do admire your willingness to take on daunting tasks like the notifications

Checkpoint 2 Sprint 3 peer review 04-12-2023

Mainly mobile app development, fixed issues we have with android studio now focusing on notification

Comment got lost after submission, see checkpoint 3 for up-to-date feedback on your performance.

Youssef worked well on the mobile app and helped a lot with the deployment. He knows very well what his goals are and how to achieve them.

You almost single-handedly created a mobile application and are now working on improving it. Also, you improved your communication from the last sprint. Try to ask for help more often even if you don't know what is the error, both teammates and teachers.

You've done well with the mobile app deployment and working on the notifications, you kind of seemed to take the feedback harshly last time so i want to share i do think you're a valuable team member and a hard worker but still an improvement point would be to be more open to feedback and to not be afraid to ask someone to look with you at something you're having issues with even if you're not exactly sure what the issue is.

You have worked very hard this sprint and contributed significantly to the ionic application. Your communication has improved since the last peer review. It would be good if you would come on-site more often, given that we work on the group project most of the time in TQ. If you work so well from home, I am sure that working together on location would make things even better.

Checkpoint 1 Peer review for Youssef Belganche 10-11-2023

Part of research tasks and part of documentation and mostly doing coding tasks, specifically mobile all

He worked well on the mobile app. He has great ideas about the project. It is better if he can work more on TQ, then we can help each other and solve the problems together.

Did a big amount of work for a group project. Good level of communication. Also, try to present during the next sprint. Overall, good job!

He is a hard working group member, and is getting tasks done quickly. There are slight communication issues, but this has not been a problem, and it has not affected our workflow. He could communicate more regularly in the future, especially when working from home.

You've been working on the Ionic app, getting it working and implementing the SurveyJS functionality. I'm really happy with the progress you made on the app. During the demo, it worked exactly as expected. However, you tend to get easily agitated when decisions are made that you disagree with.

I think you've done well setting up the ionic app and the authentication within it. however i think you should improve with communication and planning as you kind of tend to work rather haphazardly sometimes im not sure what you're doing, for example the ionic demo where we suddenly were working on the same task which i think is kind of wasted effort for the both of us.
